Although Word, OneNote, etc. Also a good idea to include any specific search terms requested. Investigation and research need to be deployed on a paper in a professional manner to make it clear and informative. Year after year I've given the same answer: a list full of outdated links and a verbal "laundry list" collection of tidbits and other documents I've collected and have seen work over my 15+ years of working in this field. Without wasting any time let's start with two important phases: 1) Good planning and preparation?) Good case notes/bench notes Planning & Preparation "Failing to

prepare is preparing to fail" -Coach John Wooden As a young examiner years ago I was working a case that involved a hodgepodge of stolen items: guns, money, and a dog (yes a dog). Certainly not necessary, but it makes it so you always remember to include them in my reports (and work from the same template). Tool reports may be considered supporting documentation to the examination report or referenced as an appendix. Download the document and open it to get access to a basic forensic report structure. That all said, I'll do my best to address these (and a host of other things) in this post. A good read that approaches this process head-on is the article written by Dr. Mark Pollitt (one of my early graduate school and career mentors) titled The key to forensic success: examination planning is a key determinant of efficient and effective digital forensics. The Forensic Report Digital and multimedia evidence, as well as the tools, techniques, and methodologies used in an examination, are subject to challenge in a court of law or other formal proceedings. I always tell students and colleagues that everything should distilled down to "make sense to "your 80 old grandmother." I think most all of us can relate to that funny, yet so-true symbolism. The Scientific Working Group on Digital Evidence (SWGDE) provides a Glossary of Terms with general, as well as discipline specific, definitions as they apply across the spectrum of image analysis, digital forensics, video analysis, and forensic audio. Example Case Summary On today's date, Detective Marco Marshall contacted the Digital Forensics Laboratory in regards to extracting data from an Android device that had been recovered from a crime scene. Are you prepared to explain your highly technical findings to a lay audience? Description This customizable and fillable form in Word format is a template for forensic labs to consider using when writing their analysis report. You will include your hypothesis here. Example Evidence Listing: Objectives this section outlines spcifically what are you being asked to do. Proper documentation is essential in providing individuals the ability to reproduce the forensic process and the results. The Scientific Working Group on Digital Evidence (SWGDE) states that Reporting is the process of preparing a summary of steps taken during the examination of digital media. A thorough examination report is written using documentation collected by the examiner, including photographs, drawings, case-notes, tool-generated content, etc. A good evidence listing will include make, model, serial numbers, description, condition, hash values, custodian information, etc. Although it doesn't include every term you would need to define in your forensic reports, each of these are reputable sources with definitions that should stand up in court. You may be just receiving the fdigital evidence and someone else conducted the forensic acquisition and this is a good place to document that as this will correlate with your chain of custody information that you immediately started once you came into contact with the digital evidence. A former digital forensics laboratory manager and examiner. Josh has over a decade of experience in the field of digital forensic examiners/analysts it's a given that we must report and present our findings on a very technical process in a simplistic manner. There might be factors in additional reporting such expert witness disclosure requirements, requirements mandated by accreditation bodies, and agency protocol, which is not, nor did I desire it to be, considered within the scope of this article. This template will help you cover the scene and story in a readable and professional format. You may also see project management reports. ASTM has also developed Standard Guide E2916-Standard that we've established our casenotes it's now time to move to the actual Forensic Report. The report took forever to draft because of the complexity of the searches and steps performed. Newbie or seasoned examiner, it doesn't matter. In this paper, Dr. Pollitt approaches examination planning through using the National Institute of Standards and Technology (NIST) SP 800-86, which describes the process in four (4) stages, defined as follows: Collection: Data are identified, labeled, recorded, and acquired from all of the possible to start one after your case is done..." -Brett Shavers (DFIR.training) Case Notes (or Bench Notes) are the detailed notes or contemporaneous records that an analyst takes when analyzing the case in whatever tool (or method) they are using. Reports generally follow a logical flow: There really isn't a de-facto standard or format per-se. Many forensic tools come with built-in reporting functionality that is specific to that tool's actions and results, but does not typically document the full scope of the examination. Investigators need the ability to document complex investigations and not worry about losing or misplacing critical notes and document sessential for full disclosure if and when such cases reach litigation. These terms are aggregated from sources such as aforementioned SWGDE & ASTM glossaries. Keep in mind, MOST of the work that DFIR examiners ends up in court and/or legal proceedings in some way, shape or form. The purpose of the Forensic Report is simply to tell the story of what the presence or absence of the digital artifact indicates, regardless. if it is inculpatory or exculpatory or exculpatory in nature. This section will vary in length but generally this should be a one-paragraph summary of the entire report. Also, write references, if you have used it. About The Author Josh Brunty is an associate professor at Marshall University, where he teaches both foundational and specialized laboratory courses within the digital forensics, information assurance, and forensic science graduate degree programs. Items to be reported may include the following: a description of the actions that should be performed, such as forensic examination of additional data sources, securing identified vulnerabilities, and improving existing security controls; and recommendations for improvements to policies, guidelines, procedures, tools, and other aspects of the forensic process. is also good practice. This template has been used in a number of law enforcement and federal government agencies and can be used to document examinations of computers, servers, tablets, cell phones, and other devices. What software and/or templates do I use to keep such notes? Furthermore, does the report prepare YOU to explain your findings? Any additional steps that you take (e.g. forensically wiping storage/examination media, utilizing bootloaders in mobile acquisition, etc.) should be notated in this section of your report. One of the things I really like & appreciate about Forensic Notes is that it compels DFIR examiners to carefully and contemporaneously take notes in a given investigation. A very good practice when you are including your evidence into your report is to include hyperlinks to exhibits/figures/tables etc. The report may include something similar or a slightly different flavor to the following: Title Page Table of ContentsOverview/Case/Executive SummaryEvidenceObjectivesForensic Analysis (Steps Taken)Relevant FindingsConclusionExhibit Title Page The Title Page should, at minimum, include case name, date, investigator name and contact information. "Are my case notes discoverable in court?" Well, that answer depends. Forensic reports are used as a proof, document, and also used for billing and affidavits. He has served on several federal and state level cyber crime task forces and panels, and has participated in both national and international committees and panels focusing on the advancement of digital forensic science and digital evidence in the United States. Remember, this section of your report is usually where you as the examiner/analyst came into contact with the digital evidence and thoroughly documenting what you have done is very important to the integrity of the digital evidence and your chain of custody. One question that commonly pops up is: "Do I write reports in 1st or 3rd person?" Well the answer is quite simple: "It depends..." Once again, I took to Twitterverse to ask the question of the DFIR community. Good question! There are both paid and open-source applications out there to manage case notes. Forensic Analysis (Steps Taken) This is what you did, what you did it with (including make, model, and version of software, tools, etc.). Better yet, will someone else be able to make sense of (or even validate) your findings if you're not around to explain them? Some are tailored to forensics, some are tailored to forensics, some are tailored to forensics. rather than complimentary to the report. When the case goes to trial and you are called upon to testify a year or more in the future will you be able to remember the case based simply from the details you included in your own digital forensic report? Hence, the motivation to put together a compendium of resources and "lessons learned" into a single living resource per-se. Prior to acquisition of the mobile device, the analyst photographed the device, documenting any identifiers (e.g., make, model, serial #), unique markings, visible damage, etc. Relevant Findings The Relevant Findings should be most detailed section of your investigation. These concerns bring about questions such as: What templates do I use? Appendices Good appendices can make or break a good report. This process repeated itself it least 4-5 more times over the course of the next 3 months. In all my years I never really had a clear, concrete answer to point to, so to answer this question I took to Twitter (see below) to ask the DFIR community. You can write effective reports without missing a single key element that can affect the quality of report writing. You may also see technical reports. If you have any DMCA issues on this post, please contact us! "How do I write a good DFIR reports." - Literally Everyone at some point You wouldn't believe how many times that question gets asked out of me here at Marshall University (and sometimes in the DFIR community). The suspect ended up taking a plea deal over a single Google search that I found on the laptop that matched the model of gun stolen. You will need to include a PDF copy of any automated, tool-generated reports (i.e. Cellebrite, Axiom, Autopsy) in your appendices as well. All figures and table must include a descriptive caption. When writing your DFIR reports do you all use 3rd person (I, me)?— Josh Brunty (@joshbrunty) November 11, 2020 As you can see the responses varied all over the place, but the general consensus is that the voice should be dependent upon the circumstances itself. These should be all of the Bookmarks that you created. Clearly the last stage focuses on the Reporting phase of the analysis, which is the major focus of this write-up. You can write effective crime scene forensic report by reading and understanding the pattern of report writing. Forensic report creation is a process of presenting information with proofs and facts supporting the case or incident. It's a good rule of thumb is to reserve exhibits A and B for your CV and Evidence Chain of Custody, respectively. Keep in mind, this is an overview and a summary of how the case was initialized and where you as the examiner/analyst became involved. Multiple times throughout the course of that case, the detective continued to drop by the lab to supply me with intelligence which was nothing more than additional keywords and suspect names to search for pertaining the case. Furthermore, you want to consider that these case notes should be bringing you to the ultimate goal of producing a better forensic report and not just adding additional burden upon your caseload. There are dozens of models that describe the digital forensic process and how to approach this planning. The responses were interesting... This might be a somewhat naive question but this question but t 2020 As you can see there is a consensus on the the answer: "Yes." Long story short, case notes are discoverable under the Federal Rules of Criminal/Civil Procedure. The analyst determined the packets to have ranged from 01:51:07 on 07/22/2008 (Figure 1) until 06:13:47 on 07/22/2008 (Figure 2). I'll admit that early in my career I truly undervalued the importance of case notes and how they led to a better report. However, that grandmother may be a supervisor, client, attorney, or even a judge and/or jury who will ultimately read and interpret your report. The total number of packets contained in the file were then determined by the analyst to be 95,175 packets. Analysis #2- Examination of Protocol Hierarchy: The analyst examined the protocol hierarchy for the entire PCAP file using Wireshark (Figure 3) *and found 100% of the packets to be Ethernet, with 95.8% having an IPv4 IP address. exists and will do the job they aren't really tailored with auditing capabilities and other bells and whistles that come in handy in a digital forensics caseflow. Later in my career I sought to answer these questions BEFORE I began the case rather than after. You will include any relevant information regarding what led to you as the digital forensic examiner/analyst becoming involved with the digital evidence. What headings do I include? It's the whole reason they call us analysts or experts right? For some analysts and labs these are merely simple text/document files with items that will be a hard reminder of how to list these items in a report. The Lexicon also includes the source document of the definition. Even when drafting the report, the detective was STILL giving me keywords! A process that should have taken a few weeks weeks took months and hours of fruitless searches. He has authored books, book chapters, and journal publications in the field of digital forensics, mobile device forensics, and social media investigation. It includes extensive research and investigation skills. Each caption must include a figure/table number (bolded) followed by a detailed description of what the figure/table not to utilize scientific terminology when writing a report, especially when describing methodology. Formatting and layout options are up to the examiner/analyst, or they may be defined by organizational policies or jurisdictional court rules. 1st or 3rd Person? In addition, NIST OSAC has created a lexicon of over 4,000 terms organized by forensic discipline. That all said, it comes down to the decision of the analyst. \$19.95

Now, with years of experience under my belt, the value of good notes is no-doubt at the top of my list. How do I list figures? The list can go on and on and on. It is especially important to include if you were asked to perform a targeted investigation. That all said, it's still important to keep detailed case notes not just for court discovery, but to refresh your own memory if, and when you get to drafting the final report. A common header and/or footer with distinguishings such as an agency logo, address, examiner name, etc. If drafting in Microsoft Word a table of contents can be generated automatically. I'm sure at this point you are asking "What should my case notes look like?" Well that depends on a variety of factors. Conclusion This document is not intended to be a de-facto standard or a "This is how it's gotta be done" type of article, but rather a roadmap to get an analyst/examiner to the desired result of a good report. Steps were taken to ensure the time and date of packets contained on the file were set to UTC time prior to determining the range of packet captures.
